

Highlights

- Create a unified email and IM archive. Search one place to find your electronic communications.
- Integrates with existing third party email archiving solutions or store chats in a searchable Lotus Domino database.
- Capture the tone of Lotus Sametime chats with formatting, graphics, emoticons, attachments, and explicit file transfers.
- Include or exclude users by user name, OU, or group.
- Highly scalable and secure. Can be used enterprise-wide.
- No proxy required. Runs natively on your Lotus Sametime server.

Permessas IM Archiver

Instant messages are covered by the same compliance and legal discovery requirements as email. When that urgent legal request comes in or an investigation starts, it is your obligation to retrieve entire conversations – not just a collection of messages – with all of the information that provides the tone for the conversation, including bolding, emoticons, graphics and explicit file transfers. It also must properly handle multi-person (n-way) chats.

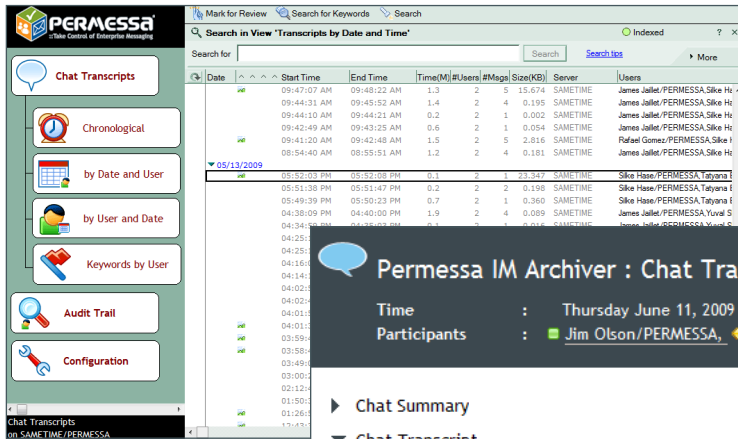

The complexity on IM archiving requires an enterprise-grade archiving application like Permessas IM Archiver. Permessas IM Archiver is a native Lotus Sametime application that captures all Sametime messages, including both 2-way and n-way chats, in full fidelity. It then assembles the messages as a conversation, complete with all formatting, graphics, emoticons, attachments and explicit file transfers to capture the tone and other content. It then copies the conversations to your existing email archiving system.

When it is time to search, you will be able to search all of your email and instant messages in one place and with the same commands that you already know. There is no need for your end users to learn a new tool.

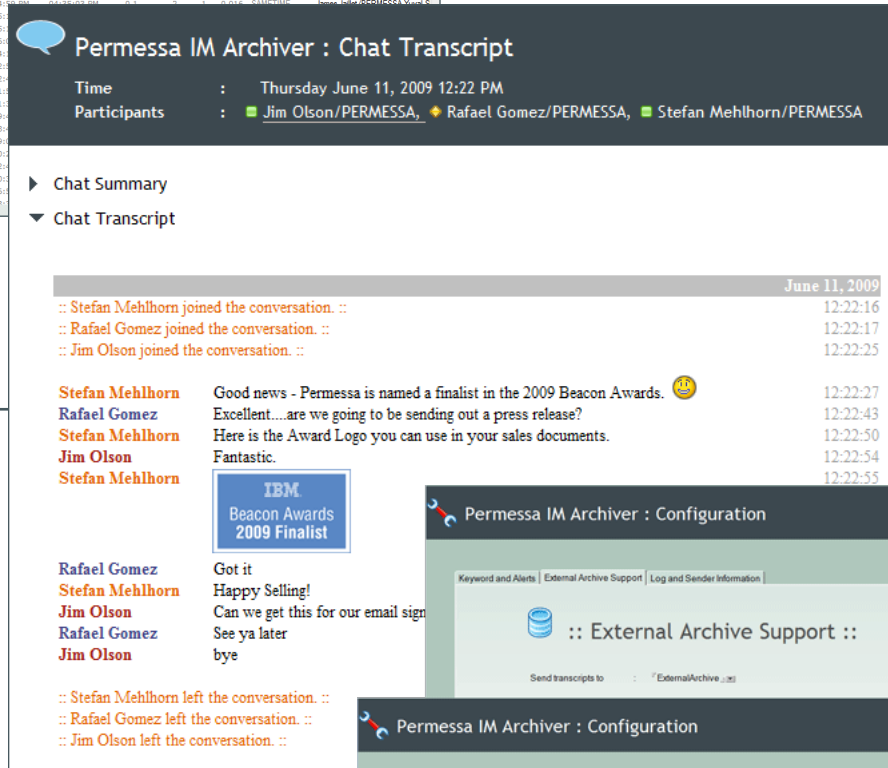

Permessas IM Archiver is a highly scalable, secure, enterprise-wide solution based on Permessas IM Control!, which is widely deployed at leading global enterprises

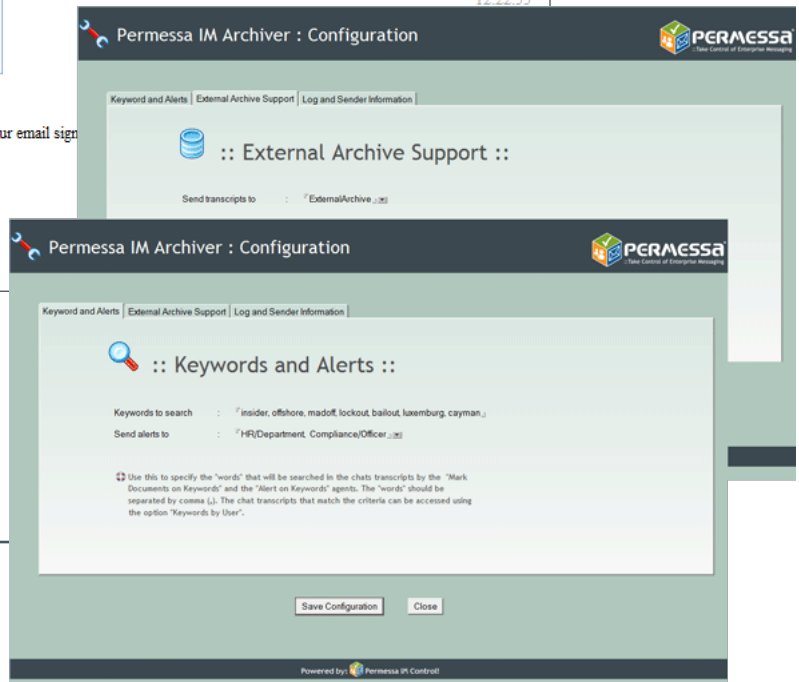

Product Screen Shots

Main Screen (above) organizes the chat transcripts in the order you select.

Transcript Screen (above) shows the chat in full fidelity, including images and emoticons, with color coding for participants.

Configuration Screens (above) makes it easy to archive IM with your existing email archive, to search, to set alarms, and more.
