

Highlights

- Reduce IBM Lotus Domino costs by up to 40%.
- Reduce log analysis time by up to 95% with comprehensive reporting.
- Get detailed, actionable recommendations that can lower costs and improve service quality.
- Prevent abuse and compliance violations.
- Customize and enforce email policies at the source.

Permessas Email Control! v5.0

At most enterprises, just 1% of the messages sent are responsible for 80% of the storage consumption, productivity loss and legal risk. Permessas Email Control! is the first product designed to identify and fix the problems caused by these messages without impacting the good email.

Permessas Email Control! begins with comprehensive reporting, which can reduce log analysis time by up to 95%. It then goes beyond reporting with specific, actionable recommendations based on Permessas's 15 years of experience with leading enterprises. Unlike other products, Permessas Email Control! answers IT's question, "What should I do now?"

For each recommended policy, Permessas tells you who would have been affected. Fine tune the policies or exempt specific users using our exclusive "what-if" scenarios. Permessas Email Control! updates the results page with the revised information about impact and savings.

Once you are ready, Permessas Email Control! can automatically enforce your customized email policies. On-going reporting enables you to see if the policies have been effective.

Usually, taking action on just a handful of messages yields significant savings and performance improvements. With Permessas Email Control!, you can reduce overall email volume and enforce policies that lower costs, improve service quality and reduce risk.

WINNER

Features

- **Actionable Policy Recommendations:** Creates a prioritized list of policies by analyzing email behavior. Compares behavior with an extensive baseline of companies. Continually monitors the effectiveness of policies and updates recommendations.
- **“What-If” Scenarios:** See how much could be saved and who would be affected by each proposed policy. (You will know if the CEO’s mail would have been stopped.)
- **Enforcement:** Blocks or quarantines messages that violate policies and can send notices to the affected parties.
- **Works Close To Sender:** Reduces network traffic or the need to archive wasteful messages.
- **Real-Time Dashboard:** Shows up-to-the-minute performance and health of the email environment.

The screenshot displays the PERMESSA Email Control dashboard. It features a navigation bar with 'View', 'Options', and 'Help'. The main content is divided into several sections:

- Attachment Types:** A table listing policy actions and their supported file formats:

Warning	[gif, jpg, jpeg, ico, bmp]
Quarantine	[ppt, id]
Rejection	[ini, exe, dll, sql]
- Estimated Policy Effectiveness*:** A summary of metrics:

# Messages Affected	24 ↑
% Messages Affected	0.33 ↑
# Senders Affected	6 ↑
Volume Saved	17 MB ↑
Impact Saved	35 MB ↑
Savings	\$ 3.5 ↑
- Restriction Details:** A list of restricted items:

Warning	6
Quarantine	3
Rejection	4
Excluded Senders	0
Excluded Groups	0
- Table:** A table showing assessment results for various policies:

Assessment	Name	# Messages	# Senders	# Attachments	Volume
Warning	wma	480	1	480	348
Quarantine	log	2	1	2	10
None	ntf	9	2	9	9
None	cab	26	1	26	3
Rejection	exe	1	1	1	3

- **Control Access to Mailing Groups:** Restrict access to specific senders or warn users before a group is retired.
- **Software Solution:** Native software-only solution that does not require the purchase of a gateway.

Examples

- **Dramatically Cut Storage Costs:** Act on messages which consume the most resources. For example, while some companies block messages with large attachments, Permesssa Email Control! also finds email with medium-sized attachments which were sent to so many recipients that they consume disk resources.
- **Improve Productivity:** Eliminate mail that wastes time due to the abuse of mailing lists, reply-to-all and attachment ping-pong, in which attachments are copied back and forth in replies.
- **Improve System Performance:** Meet SLAs by finding messages that impact network performance during peak demand.
- **Enforce Ethical Firewalls:** Prohibit certain employees or departments from communicating with each other.
- **Enforce Recipient Firewalls:** Block messages sent to inappropriate domains, competitors, or even particular recipients. Can be adjusted by sender or group.
- **Block Privacy Violations:** Intelligently identify social security numbers, credit card numbers, and other confidential information.
- **Provide Distribution List Safety Net:** Warn senders before email is sent to a large list to avoid embarrassment.
- **Sender Education:** Provide warnings when policies are violated.
